Deluxe Packaging Corrugated Boxes

Did you know that over 90 percent of all goods in most developed countries are shipped in corrugated boxes? These boxes are every bit as versatile as they are durable. **Corrugated boxes** are easy to store and easy to ship.

Deluxe Packaging offers many of the standard corrugated box styles and supplies custom sizes upon request. Here are some of the standard corrugated box styles we carry.

Slotted box styles are generally made from one piece of corrugated or solid fiberboard. The blank is scored and slotted to permit folding. The box manufacturer forms a joint at the point where one side panel and one end panel are brought together. Boxes are then shipped flat to the user. When the box is needed, the box user squares up the box, inserts product and closes the flaps.

With **Self-Erecting Boxes** the top panels of the box are usually those of a regular slotted container. For a telescope-style box, two self-erecting pieces can be used.

The three pieces of a **Rigid Box** style include two identical end panels and a body that folds to form the two side panels, an unbroken bottom and the top. Flaps used to form the joints can be on the end pieces or the body or both. The end panels are attached to the body with special equipment, usually at the user's plant. Six or more joints must be sealed to set up the box before it is filled. The name Rigid Boxes comes from the fact that once the six or more joints are sealed, the box is rigid.

Pads, Tubes & Partitions include; Series Liners, tubes, pads, build-ups, dividers, partitions and other inner packing pieces that can be made in an infinite variety of ways to separate or cushion products, to strengthen the box or to prevent product movement by filling voids. They may be simple rectangles, or scored, slotted, scored and slotted, or die-cut shapes.

For **Folders**, one or more pieces of combined board provide an unbroken bottom surface, and are scored to fold around a product.

Telescope boxes usually consist of a separate top, or top and bottom, that fit over each other or a separate body.

Deluxe Packaging Foam

Deluxe Packaging offers a full selection of polyethylene foam in planks and sheets as well as fabricated foam (die cut and glued). Polyethylene foam provides superior shock absorption during transportation. It is highly flexible, non-abrasive, clean and dust-free and is dust and moisture repellent.

Die-cut urethane foam allows any interior shaped items to fit with maximum desired surface contact within a container. Product is supported by foam cushioning and shifting is minimized against shock of acceleration or deceleration. Urethane can be die cut and laminated to other foam products or corrugated board to create adequate interior protection and rigidity.

Deluxe Packaging also carries polystyrene foam EPS and polyurethane foam, die cut and conventional. Polystyrene foam EPS is ideal as a construction material and it is therefore sometimes used in structural insulated panel building systems. It is also used as insulation in building structures, as molded packing material for cushioning fragile equipment inside boxes, as packing "peanuts". Foamed between two sheets of paper, it makes a more-uniform substitute for corrugated cardboard.

Deluxe Packaging Poly-Bags

Deluxe Packaging carries a complete line of bags. This extensively used form of packaging makes packing operations more cost-effective and efficient. Bags offer tremendous cost savings and ease of use. We sell a broad range of bags including but not limited to:

Polyethylene bags are used for a wide variety of packaging applications. They hold everything, including small parts and all types of food items.

Benstat® Bags are available in 4 and 6 mil thicknesses. They meet all the ESD requirements of MiI-8-817058, Type II. These fully transparent bags will protect sensitive components from electro-static damage for the life of bag, and can be stored for an indefinite period. With no particulate sloughing, they are completely acceptable for clean room applications. 2 mil bags and custom sizes are available by special order and minimum order quantities are required

Antistatic Packaging Bags are permanently antistatic, not dependent on moisture for conductivity. These transparent bags protect sensitive components and meet MIL-8-817058, Type II. They're available in 4 and 6 mil thickness, and can be stored indefinitely. With no sloughing, they are completely acceptable for clean-room applications. Sizes 2"Wx3"L to 24"Wx36"L. 2 mil bags and custom sizes by special orders.

Bags of this type will also be available in **STATICURE®** material.

Zip-Lock Antistatic Bags provide protection for handling and shipping static-sensitive components. These transparent bags qualify as electrostatic discharge prevention per 000, Standard 1686 and 000 Handbook 263. They also meet static decay rate provision of MIL-8-8J7058 and are fully clean-room safe. They are available in sizes 4"Wx6"L to 12"x12".

Deluxe - Packaging Supplies

Deluxe Packaging sells all kinds of packaging supplies and shipping materials including padded bags or bubble lined bags. These are used widely in mailing and fulfillment operations to cushion and protect a wide range of products. Other offerings include:

Regular and Antistatic Foam Cushioning:

Rough handling will not affect your shipment if it is wrapped in foam. Foam is perfect for padding cartons, wrapping items, or inserting between delicate objects. Foam is imbedded with air cells that form an extra margin of safety, is non-corrosive, non-abrasive, tear and puncture resistant. Weight for each roll is 18 lbs.

Antistatic features: 1-lb. density closed-cell polyethylene foam. Antistatic properties and cushioning against shock, vibration, abrasion

Bubble Cushioning:

Three perfect sizes for low volume bubble-film users. Portable container goes anywhere, stores easily when not in use. 12" Rolls are perforated every 12". 24" Rolls are perforated every 12". 48" Rolls are perforated every 12".

Antistatic Bubble Cushioning:

Features: Positive antistatic protection, transparency, flexibility and Antistatic cleaner. Non-nuclear static locators and black nylon conductive bags. Conductive foam which is independent of humidity. Portable conductive workmats and conductive tote boxes and product bins. Conductive shunt bars for printed-circuit boards. Transparent conductive bags for cmos, mos and printed-circuit boards.

Loose Fill Dispenser:

Gravity dispenses the loose-fill while you control the flow using the standard spring-loaded 5" scissor valve. Our loose-fill dispenser suspends from the ceiling and can be raised and lowered with a pulley for easy refilling. Any type of loose-fill works well. Includes Installation kit: 15' of 1/4" rope and 2 pulleys.

Polystyrene Loose-Fill Peanuts:

Delicate items stay suspended and protected in the carton during shipment with this reusable "no-stick" anti-static loose fill.

Packaging Supplies and Shipping Materials include hundreds of stock and custom sizes.
